Master of Business Analytics graduate from UBC Sauder with experience in business intelligence, reporting and analytics, and financial technology (FIS Global). Skilled in Excel (Advanced), SQL, Python, and Power BI (Microsoft Certified), with a track record of cutting report time from 25 to 3 minutes, coordinating multi-departmental teams, and turning complex data into clear recommendations that support stakeholder decision-making.

TECHNICAL SKILLS

- **Analytics & Tools Programming & Data Analysis:** SQL, Python (pandas) Advanced Excel, data cleaning, statistical analysis, regression modelling
- **Business Intelligence:** Power BI (Certified), Tableau, KPI reporting, data visualization
- **Data Quality & Process Improvement:** Data validation, quality assurance, process documentation, operational reporting
- **Project & Collaboration Tools:** Jira, Agile, Confluence, QuickBase
- **Additional:** Machine learning, NLP, LLM/RAG pipelines

EDUCATION

UBC Sauder School of Business — **Aug 2025 - Sep 2026**
Master of Business Analytics — *Vancouver, BC*

Sharda University School of Business Studies — **July 2018 - Sep 2020**
Master of Business Administration — *Noida, India*

WORK EXPERIENCE

UBC Experiential Learning | Business Analytics Internship | Live Link — **May 2026 - Aug 2026**

- Delivered competitor, pricing, and positioning analysis across 294 brands by building a platform on 25,841 laptop listings and 456,395 customer reviews.
- Turned 27.9 GB of raw Amazon data into analysis-ready datasets with a Python and SQL pipeline (pandas, Parquet).
- Proved model quality before use with three checks: 89% sentiment accuracy against star ratings on a 6,000-review benchmark, 100% segment consistency across 5,000 evaluated matching recommendations, and automated grounding checks on the RAG assistant's answers.
- Flagged customer support and battery life as improvement areas by scoring 456K+ reviews with Distil BERT

Transitioned to F2 Visa (No employment allowed) and moved to USA after marriage — **May 2023 - Feb 2025**

FIS Global | Engineer | India — **April 2022 - April 2023**

- Resolved a configuration error affecting about 20,000 payment cards before the project deadline by tracing it to an incorrect EMV product ID/BIN mapping with VLOOKUP and Pivot Tables, then coordinating escalation and the fix.
- Reduced the risk of repeat configuration errors by writing an end-to-end SOP and adding pre-production validation on 10-15 sample cards before each full batch, verified in an Excel Pivot Chart dashboard.
- Cut report time 88% (25 to 3 minutes) by building an interactive Power BI dashboard.
- Kept milestones and open issues visible across teams on financial technology implementations by tracking them in QuickBase.
- Expanded product marketing reach through partnerships with GreenDot, Capital One, JP Morgan Chase, Visa, and Mastercard.

Growth Manager | Conquering My Own Everest (GoGhumantu) | India — **Jan 2021 - March 2022**

- Raised customer acquisition from 2% to 10% (5x) and website engagement by 100% by analyzing survey and market data in Excel and designing a pay-as-you-go campaign.
- Set subscription pricing by modelling demand, market trends, and revenue drivers.

RELEVANT PROJECTS

Airbnb Occupancy Analysis | ***MBAN Program*** — **Jan 2026**

- Built log-log regression models in R analyzing 2,000+ listings, identifying price elasticity of −0.2 for Miami and −0.39 for Paris markets
- Conducted sentiment analysis using NLP on guest reviews, quantifying emotional tone impact on occupancy and generating pricing and feature recommendations projected to increase occupancy by 10–15% in target markets

Pet Adoption Prediction & Optimization | UBC Sauder | Machine Learning Project | ***MBAN Program*** — **Feb 2026**

- Analyzed 14,993 Petfinder listings using Python, NLP, and machine learning to identify factors influencing pet adoption speed and support data-driven shelter decisions.
- Built and compared 5 classification models, combining XGBoost with transformer-based text embeddings and sentiment features to predict adoption speed.
- Conducted what-if scenario analysis, identifying listing improvements (photos, videos, descriptions, and fees) that could shift 25.5% of at-risk pets into faster predicted adoption categories, informing actionable adoption strategies.

Agentic AI Movie Recommendation System | UBC Sauder | AI Project — **April 2026**

- Developed an LLM-powered movie recommendation system using Python and Ollama (Gemma 4), analyzing 1,000 TMDB movies to deliver personalized recommendations based on user preferences and viewing history.
- Designed a 4-stage agentic AI pipeline (Planner, Retriever, Critic, Copywriter), combining preference analysis, weighted candidate ranking, history-aware filtering, and AI-generated recommendations.
- Built an automated evaluation framework with 18 test scenarios, assessing recommendation relevance, constraint compliance, and response time against a 20-second limit with fallback logic to improve system reliability.
